

# AMAN WAGHMARE

Data Science Undergraduate | Full-Stack Development & Machine Learning

8624915699 | waghmare.aman007@gmail.com | LinkedIn: aman-waghmare | GitHub: github.com/aman-2022

## PROFESSIONAL SUMMARY

B.Tech Data Science student (4th year) with expertise in full-stack development and data analytics. Delivered production-ready analytics platform processing 50,000+ orders with 40% query optimization and <500ms API response times. Proficient in React, Flask, MySQL, Python with strong foundation in data structures, statistics, and business analytics. Proven ability to build end-to-end systems from requirements to production.

## EXPERIENCE & PROJECTS

### E-Commerce Analytics Dashboard – Full-Stack Development 2026

- Architected production-ready analytics platform processing 50,000+ e-commerce orders across frontend, backend, and database layers with complete end-to-end ownership.
- Designed Flask REST API with 7 endpoints delivering <500ms response time with comprehensive error handling and CORS support.
- Developed React dashboard with 6+ Recharts visualizations, real-time data filtering (30/60/90 days), KPI metric cards, and responsive mobile/tablet/desktop design.
- Optimized MySQL database through strategic indexing and materialized views, achieving 40% faster query performance on multi-million-record datasets.
- Built automated ETL pipeline in Python (Pandas/NumPy) loading 50,000+ orders in <5 minutes with comprehensive data quality validation.

**Quantifiable Results:** 50,000+ orders | 40% optimization | <500ms API response | 7 endpoints | 6 visualizations

**Repository:** [github.com/aman-2022/ecommerce-analytics-dashboard](https://github.com/aman-2022/ecommerce-analytics-dashboard)

### Weather Forecast App – Frontend & Backend 2023

- Built responsive weather application using HTML, CSS, PHP with third-party Weather API integration for real-time data retrieval and mobile-responsive UI design.

### College Recommendation System (KNN) – Machine Learning 2023

- Implemented KNN algorithm using Python, Pandas, Scikit-learn to match students with colleges based on academic metrics with interactive user interface.

### Web-Based Chat Application – Full-Stack 2023

- Built React frontend with Node.js/PHP backend enabling real-time messaging, modular architecture, and integrated Google Maps API for location sharing.

## CORE COMPETENCIES

**Languages:** Python, Java, C, C++, JavaScript

**Full-Stack:** React, Flask, Node.js, PHP, HTML, CSS, REST APIs, Component Architecture

**Data Science:** Machine Learning, Deep Learning, Data Preprocessing, Feature Selection, Statistics, EDA

**Database:** MySQL (Schema Design, Query Optimization, Indexing), SQL (JOINS, Aggregations), ETL Pipelines, MongoDB

**Tools:** Flask, Pandas, NumPy, Scikit-learn, Recharts, Power BI, Excel, Git, VS Code, Figma

## EDUCATION

**B.Tech, Data Science** – MGM University, Aurangabad | 2024 – 2027 (4th Year)

**Diploma, Computer Science Engineering** – PS College of Aurangabad Polytechnic | 2021 | 69%

## CERTIFICATIONS & ACHIEVEMENTS

- Full-Stack Development Specialization (React + Flask + MySQL) – Self-Directed Learning
- Machine Learning & Data Science Coursework (Deep Learning, Data Analytics, Statistics, Digital Image Processing)
- 3+ Production-Ready Applications: Analytics Platform, ML Recommendation System, Real-Time Chat Application
